Summary

Engineer and CEO of Stark Industries with 20+ years building advanced energy, propulsion, and AI systems. Designed the arc reactor and the Iron Man suit program. Founding member of the Avengers. MIT graduate in electrical engineering and physics.

Experience

Stark Industries (CEO & Chief Engineer), Malibu, CA

05/08 - Present

- Redirected the company from weapons manufacturing to clean energy, closing the weapons division and shipping an arc-reactor power platform within 12 months.
- Designed and built the arc reactor, a self-sustaining power source that runs the company campus and every suit in the program.
- Led R&D for the Iron Man suit across 40+ iterations, improving flight ceiling, armor response time, and power efficiency each cycle.
- Built J.A.R.V.I.S., a natural-language AI that runs suit systems, lab automation, and diagnostics in real time.
- Grew Stark Industries clean-energy revenue to a market lead while holding 1000+ active patents in energy, materials, and propulsion.

The Avengers (Founding Member), New York, NY

05/12 - Present

- Co-founded a response team for large-scale threats, leading hardware, aerial operations, and field communications.
- Designed and funded the team's compound, comms network, and rapid-deployment systems.
- Built and flew an autonomous suit fleet (the Iron Legion) for search, rescue, and containment.

Volunteer Experience

- **Maria Stark Foundation**: Funded science education and research grants, including a full endowment for an MIT graduating class.
- **Stark Expo**: Revived a public expo for open scientific collaboration, hosting teams from industry and universities.

Education

Massachusetts Institute of Technology

Cambridge, MA

B.S. Electrical Engineering and Physics, GPA: 4.00, *summa cum laude*

09/87 - 05/91

Projects

- **Miniaturized Arc Reactor**: Built a palm-sized arc reactor delivering high sustained output from a portable core, powering the wearable suit.
- **Clean Energy Grid**: Prototyped a city-scale clean power grid running entirely on arc-reactor cells.

Publications

- **Self-Sustaining Arc Reactor Design**: Stark Industries technical white paper, 2010.
- **Applied Repulsor Physics**: Presented at the Stark Expo, 2010.

Honors and Awards

- **Apogee Award for Industrial Innovation**: Awarded for advances in clean-energy engineering.
- **National Medal of Technology**: Recognized for contributions to energy and aerospace systems.

Certifications

- **FAA Commercial Pilot License**: Fixed-wing and experimental aircraft.

Skills Summary

- **Engineering & Hardware**: Mechanical design, propulsion, materials science, nanotech, electronics, robotics
- **Software & AI**: Natural-language AI, real-time control systems, Python, C++, embedded firmware
- **Leadership**: R&D leadership, product strategy, fundraising, crisis operations
